

INTRODUCING AN INTERACTIVE WAY TO EXPERIENCE YOUR WATER DISTRIBUTION SYSTEM

The Mueller® Interactive Water Distribution Experience gives you an entirely new way to look at a typical water distribution system. It's an excellent training tool and a great way to educate service professionals on the products that make up a water distribution system and their purposes. From water at its source all the way to the home or business, it gives you a detailed graphic overview and allows you to interact with the process every step of the way. It also shows how Mueller products are an essential part of maintaining reliability and the wide variety of Mueller products that play a critical role, from valves and hydrants to repair products and tools.
