

Air Release Meter Vault Now Available

An 18-inch x 36-inch Air Release Vault is now available which features:

- 2-inch threaded connection for ease of installation;
- 2-inch inline ball valve that can be controlled from the top of the vault by an extension rod
- 2-inch NTP connection for inlet and outlet;
- 18-inch diameter PVC protective, in ground, housing (ASTM D-224 and D-1794); and
- Steel platform for support.

For more information, please contact your Mueller sales or customer service representative.

Mueller® Intelligent Water Technology™ & Water Loss Solutions Create a Buzz at ACE15

Continuing Mueller's long history of developing innovative solutions for water infrastructure, three new products took the spotlight at AWWA's annual conference last month in Anaheim, California. Mueller introduced a restyled, American-made Jones® TRITON® wet barrel fire hydrant; Hydro-Guard® multi-parameter monitoring and flushing system; and mobileRDM from Mueller Systems. In addition to displaying these products at the booth, Mueller conducted technology presentations and had an interactive video wall which allowed customers to "test drive" our solutions. Please contact your Mueller sales representative for more information on these innovative new solutions.

Jones® Ductile Iron Wet Barrel Fire Hydrants Restyled

Most models of Jones® J-4000 series of wet barrel fire hydrants have been restyled. The new contemporary design – named TRITON® – features a contoured head and fluted spool yet uses the same internal components as the previous design. These fire hydrants are produced by Mueller® at its Albertville, Alabama plant which assures customers that standard orders are filled more rapidly. The new Jones TRITON design is UL listed and FM approved, meets AWWA C503 standards and rated to 250 psig (17 barg). Being American-made, Jones Triton wet barrel fire hydrants can also be certified to comply with American Iron & Steel (AIS) and Buy America(n) specifications on certain DOT, US Army COE & water utility projects. For more information, please visit www.jamesjones.com.

36" Meter Vault and Transition Ring/Frame Combination Now Available

The EZ-Vault® meter setter product line now includes a 36-inch meter vault and a meter vault transition ring/frame combination. The ring/frame combination will permit Mueller 18-inch meter box lids (sold separately) to be used on 36-inch diameter meter vaults. The new 36-inch meter vault can accommodate single or tandem meter installations. Contact your sales or customer service representative for more details.

All Hydro-Guard® Models Certified to NSF 372

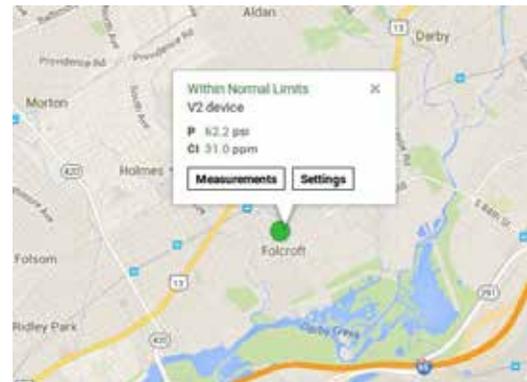

Certified to NSF/ANSI 61

All models of Mueller's Hydro-Guard® automated flushing systems have been evaluated by UL to comply with NSF 372.

This includes warm to moderate climate models HG-1, HG-2, HG-5, HG-6, and HG-11 and moderate to extreme climate models HG-3, HG-4, HG-8, HG-11, and HG-31. For more information, please visit www.hydro-guard.com.

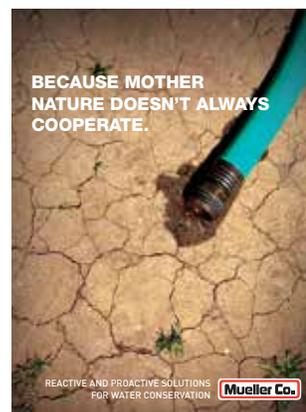

Multi-Parameter Monitoring & Flushing Introduced for Water Distribution Systems

Mueller Co. has announced a new data acquisition and condition assessment system that allows water utilities to continuously monitor critical distribution system water quality parameters. An extension of the company's Hydro-Guard® S.M.A.R.T. System, Mueller Co.'s new multi-parameter monitoring and flushing system is the latest offering in the Intelligent Water Technology portfolio of products and services. The device can continuously monitor pressure, chlorine residual, temperature, pH, and turbidity from installation points located throughout the water distribution system using third-party sensors. Data is logged and transmitted to the utility via cellular service to secure cloud-based servers and presented to the user with a GIS mapping interface. As water quality thresholds are reached, flushing is initiated and SMS-text and email messages are triggered, thus facilitating quick decision-making and event mitigation responses. For the utility, rapid response to water quality issues improves customer satisfaction, reduces customer complaints, mitigates risks and reduces operational costs. For more information or to have one of the first installations in your area, please contact your Mueller sales representative.

Trusted Solutions for Water Loss & Conservation

Do you have customers looking for strategies and approaches that yield water savings in the short-, mid- and long-term? If so, Mueller can help. This new 4-page brochure promotes the company's wide range of products and services that help utilities better manage water during times of drought. Our solutions include "shovel ready" approaches such as the Hydrant-Defender® hydrant security system and EchoShore-DX permanent leak detection technology for water distribution mains to long-term capital projects that include Mi.Net® Advanced Metering Infrastructure (AMI). Mobile Training Van Survives Texas Floods and Missouri Hail Storms

Even though it was slightly damaged by a hail storm in St Louis in April, Mueller's mobile training van survived the Texas floods. The truck and trailer weren't swept away and are still on the road. Through the first of June, the team has conducted 11 classes in three (3) states for 435 attendees. There are 32 additional classes that will be taught in 15 states throughout the Central U.S. through the end of 2015.

The mobile training van consists of (from left to right): Jason Keller (Training Assistant/Driver), Cole Canady (Junior Sales Representative), George Lacefield (Training Manager), and Kyle Adams (Assistant Training Manager).

Super Centurion® 350 Model A-421 Hydrant Now Rated at 350psi

After introducing the 5 ¼-inch A-423 Super Centurion 350, Mueller received multiple requests to increase the pressure rating for the 4 ½-inch A-421 model from 250psi. We are pleased to announce the A-421 Super Centurion 350 is now available with a working pressure of 350psi. The A-421 has the same features as the A-423 including: encapsulated main valve (to prevent the main valve from pressing into the seat ring); and a thrust bearing (to help reduce operating torque under high pressures). Contact your sales or customer service representative for more details.

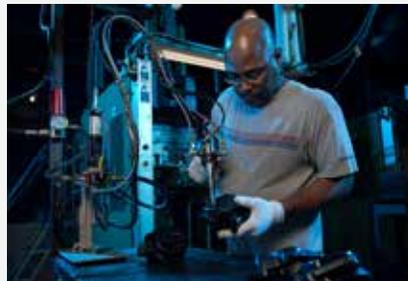

Torque Reduction Kits Available for Super Centurion 250

In an effort to reduce operating torque in high pressure applications and prevent user damage, Mueller Co. has developed a torque reduction kit that includes all the components necessary to convert Super Centurion 250 model A-421 and A-423 hydrants. The 5-¼-inch base kit number is 287874 and the 4-½-inch base kit number is 287909. Contact your sales or customer service representative for more details.

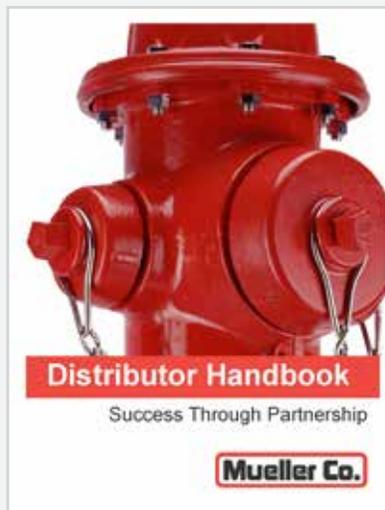

AIS Certifications

All requests for AIS or other government funding domestic requirement certificates should be made through your sales or customer service representative and accompanied by the contract specifications that detail the AIS requirement. Mueller's Trade Compliance Department will turn these around in three days or less.

Distributor Book

Mueller Co. values our relationships with our customers and distributors. To assist distributors in conducting daily business with us, Customer Service has created a Distributor Book that is available on the website. The Distributor Book includes valuable information such as: customer service contacts, writing a purchase order, information on returns, price sheets, and much more. The book is available in an easy flip-book format and divided into different sections for ease of use. To access the book online, log-in to the distributor section on the website using your username and password. Please contact customer service regarding any questions on your log-in information.

Mueller's Core Values: Treat Each Other with Respect

We value our people. We are considerate, professional and open in our interactions with one another. We are an inclusive organization and recognize that each of us contributes to our success. Treating Each Other with Respect means we will:

- Respect the opinions, talents, time and experiences of others
- Encourage coaching, performance feedback and providing career development opportunities for professional growth
- Endorse an inclusive environment to benefit from people from different cultures, ethnicities, religious faiths, sexual orientations, disability communities, geographic regions, viewpoints and genders
- Meet commitments made to one another
- Encourage open and honest communication and productive conflict that leads to positive work relationships and moves us forward

Customer Service Update

Communication drives great customer service. Over the past year, we have added a multitude of new, updated services which include: re-acknowledgments, receipt of material on a return, cancellation notifications, pick up notifications, and many more. In addition, we added your customer service representative's name to all order acknowledgments so you are aware of who handles your account. We have more upgrades coming and look forward to sharing them with you soon!
