H-603 Power Operator

Circuit Breaker Feature

Mueller Co. has modified our H-603 Electric Power Operators to include a circuit breaker feature. In the event the unit encounters a sustained high current draw situation; the breaker is designed to cut the current supply to the motor. If the breaker is activated and stops the current flow, after 30 seconds, the breaker may be manually reset by pushing in the reset button located on the circuit breaker at the bottom of the motor housing. The operator should function normally after the reset until another over current draw situation occurs. If the breaker continues to activate and stop the current, the reason for the over current draw must be investigated and corrected.

(continued)

Circuit Breaker Feature (*continued*)

Mueller Co. ha modificado el dispositivo de operación de potencia eléctrica H-603 para incluir un interruptor de protección. En el evento de que la unidad encuentre una situación de alta corriente sostenida; el interruptor está diseñado para cortar el suministro de corriente al motor. Si el interruptor se activa y corta el flujo de corriente, después de 30 segundos, el interruptor se puede rearmar manualmente apretando el botón de rearmado localizado en el interruptor de protección en la parte inferior de la carcasa del motor. El dispositivo de operación eléctrica debe funcionar normalmente después de rearmarlo hasta que ocurra otra situación de sobrecorriente. Si el interruptor se activa continuamente y corta la corriente, es necesario investigar y corregir la razón de la sobrecorriente.
