

# Mueller® Grip Compression Connection

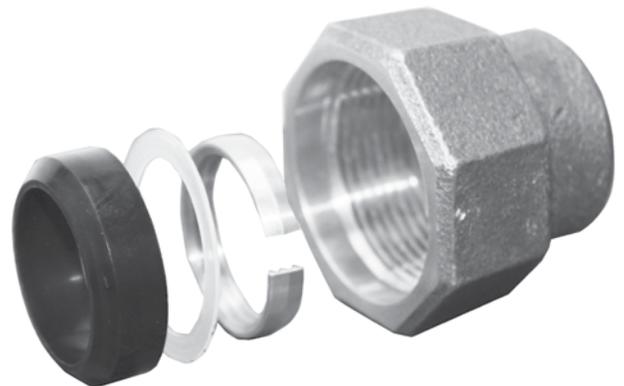

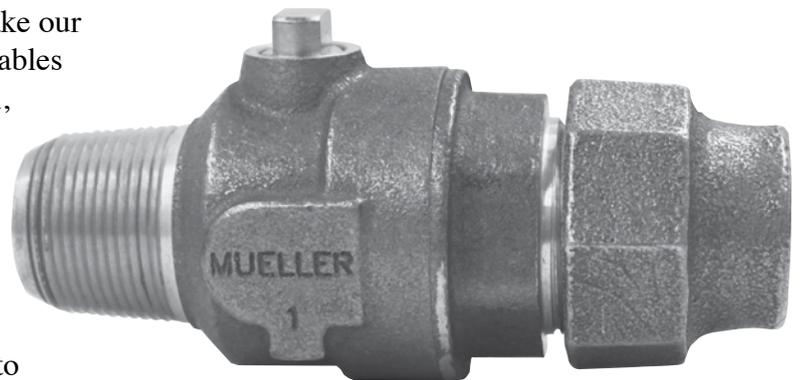

Easy to Install • Easy to Order

**A**n important goal at Mueller Co. is to make our customers' jobs easier. With all the variables that can affect a service line installation, having this new "third" option in compression connections makes it that much easier to select a type that fits each specific installation.

The Mueller Grip Compression Connection is a stab connection with large wrench flats, an integral pipe stop – it couldn't be much simpler to use. Then, once the job is done, the connection's resistance to cold flow and creep, positive seal and exceptional pull-out resistance helps to make sure it "stays done."

Plus, it is very easy to order this new Mueller connection – just put a "G" in place of the "H" or "B" on any Mueller product with a CTS compression connection, 3/4" to 2" in size. It's that simple.

And nothing could be simpler when it comes to finding the selection of quality, reliable water products you need than to specify the Mueller brand – in the water distribution industry, it stands alone. Spec Mueller — its a Smart Move.
