DESIGN FEATURES

- 3.1 **Connection parts** are pre-assembled permitting piping to be stabbed into connection for fast, easy assembly, except for corporation valve use. *For this use only it is necessary to remove the connection while corporation valve is inserted into the main or drilled through.*
- 3.2 **Serrated grip** holds tubing/pipe securely against pull-out; on metallic tubing assures electrical continuity.
- 3.3 **Stainless steel washer** beneath gasket reduces assembly friction and avoids gasket twisting or snaking while compressed.
- 3.4 **Sealing gasket** is totally confined to prevent cold flow or creep which could cause future leakage.
- 3.5 **Stainless steel continuous tube liners** are used when this connection is used for plastic tubing or pipe, which are flared at one end to prevent over insertion into end of pipe.
- 3.6 **MUELLER Grip Compression Connections** are supplied as integral parts of a variety of water-works products such as corporation valves, curb valves, meter valves and meter setting materials, and also as separate couplings and fittings.
