WARNING:
1. Failure to read and follow the instructions contained within this manual could result in serious personal injury, and/or damage to the Hydro-Guard® Automatic Flushing Device.
2. Each person involved in the assembly, installation and/or maintenance of the Hydro-Guard Automatic Flushing Device must read this manual carefully and follow all instructions prior to performing any installation or maintenance procedures involving the Unit. 
3. Verify the drainage path prior to installation to ensure that pedestrian and vehicular hazards will not be created by the installation and use of the Hydro-Guard Automatic Flushing Device (in areas in which freezing may occur, special attention should be given to this procedure).
4. Never assemble, disassemble, or perform Hydro-Guard maintenance unless the influent supply valve has been closed, verified and secured, and internal piping pressure has been relieved.
5. Always use all necessary safety equipment and follow all recommended procedures when installing, operating and maintaining the Hydro-Guard Automatic Flushing Device.
6. Perform annual safety inspections and replace worn or defective parts.
7. Operate the Hydro-Guard Automatic Flushing Device only when fully installed and correctly assembled.

CAUTION:
The recommended optimal operating pressure for a Hydro-Guard® Automatic Flushing System is between 20psi and 120psi. In the event pressure may exceed 120psi it is recommended that a Pressure Regulating Valve be installed ahead of the Hydro-Guard flushing system.
**GENERAL**

**Overview**
The Hydro-Guard® HG-6 Hydrant-Based Flushing System is a portable and emergency use device designed to flush water lines from fire hydrants located anywhere in the distribution network. These devices require the hydrant to be live when programmed for flushing. The HG-6 has been engineered and manufactured to provide outstanding dependability and performance.

Please read and retain this manual for future reference, training, troubleshooting, and maintenance.

**Site Evaluation**
Each installation is unique and will require a minimum of advance planning. Prior to installation, the drainage patterns for the intended installation location should be reviewed. The drainage pattern must permit discharged water to flow away from the Hydro-Guard® Unit or to be absorbed by the surrounding soil. The Unit’s ground-level erosion controlling splash plate is designed to disperse the water energy from the discharging water and reduce the risk of erosion from around the base of the fire hydrant. In order to prevent undue pooling of the effluent water, multiple nightly flushes are effective in managing discharge volumes.

**INSTALLATION**

1. Remove the Hydro-Guard® Unit from its packaging and inspect for possible damage during shipping.
2. Using the pumper nozzle, flush hydrant for several minutes to ensure the water flow is free of debris (i.e., rocks, etc.)
3. Confirm hydrant is turned off.
4. Gather 2” NTP connector and hydrant wrench.
5. If necessary, loosen but do not remove the four bolts on the side of the Hydrant Flusher in order to adjust connection height, ensuring the device is supporting its own weight. Once proper height is determined, tighten the four height adjustment bolts.
6. Connect the Hydro-Guard® Unit by means of the 2” threaded nipple and supplied hose adapter.
7. Open the hydrant’s valve in order to charge the hydrant.
8. If the HG-6 has been shipped with the Dechlorination Upgrade; remove one of the security screws at the door at the unit’s base, remove the dechlorination chamber, open, fill with sodium sulfite or ascorbic acid tablets, reinsert and replace security screw.
9. Disinfect the Hydro-Guard® Automatic Flushing Device in accordance with the utility’s policy. Do not exceed the dosage and contact times recommended by the American Water Works Association.
10. The Hydro-Guard® Automatic Flushing Device may now be programmed and placed into service.
Technical Data
• Operating temperature range of 32º to 120º F
• Operating Pressure: 7 to 200psi

NOTE: Where sustained pressures may exceed 120psi the installation of a pressure reducing valve (PRV) is recommended.

Battery Life
• Will vary based on number of cycles per year, operating pressure, and temperature. We recommend checking the battery every 6 months, but in many cases, you will get more life out of them.

HG-6 Removable (Requires Handheld)

TBOS-II Programming Instructions
The TBOS-II handheld uses on screen prompts for intuitive programming. It will control current programming interface (T-2: dark gray case), as well as the previous model of programming interface (T-1 modules programmed by the TBOS-US handheld).

Features
• 1 to 24 possible flushing events daily, or on selected days weekly, 365-day calendar
• Flush duration 1 minute to 12 hours (1 minute increments)
• Preprogram and store up to 3 different schedules
• Rechargeable battery (low battery indicator shows both handheld and controller battery conditions) with recharging adaptor (9-volt lithium battery can be used in the built-in programming interface)

NOTE: In that the handheld was designed by its manufacturer to program flush systems, many displays use flush terminology.

In the following instructions, in such cases the equivalent flushing terminology is shown in parentheses.

CAUTION: Leaving the infra-red connector connected to the built-in programming interface can significantly reduce the battery life of the 9-volt batteries in the programming interface and the rechargeable battery in the TBOS-II handheld.

TBOS-II Handheld Keys
HOME – press three seconds to turn handheld on.
ABC – press to choose from three available programs (to store a program when preprogramming, or uploading a program to controller).
LEFT and RIGHT ARROWS – move curser left or right, also go back or forward one screen.
ON and OFF/+ and – /UP and DOWN ARROWS – Used to set flushing events on or off, move selector up and down on screen, or increase or decrease duration and other values.
OK – press to make selection final.

TBOS-II Handheld Home Screen Menu
1. TBOS infra-red – accessible only when connected to programming interface via the IR cable: select to connect handheld to programming interface via infrared cable and access programs on it, or to transfer programs from handheld to programming interface.
2. Templates (TBOS-II) – select to program handheld without connecting to programming interface.
3. Settings – select to access and set time, date, and various other available user settings.

First Time Use
1. Press HOME key for three seconds to turn on handheld.
2. Press RIGHT ARROW key or the OK key to access “Settings”
3. Use DOWN ARROW to select and set the following:
   a) Date and Time
   b) Contrast of the screen
   c) Name of the handheld controller (can be assigned to a specific operator)
   d) Language (English, French, Spanish, Italian, Dutch, Portuguese, Turkish, etc.)
HYDRO-GUARD® HG-6 Flushing System

Programming Flushing Schedule

There are two ways to proceed:

- select “TBOS-II infra-red” if IR cable is connected to a TBOS-II programming interface to access, change or load programs there, or
- select “Templates (TBOS-II)” to create or change programs stored on the handheld to load onto a programming interface at a later time (IR cable not used).

NOTE: The home screen for “TBOS-II infra-red” shows battery condition for programming interface and ON/OFF state of any current operation in progress.

1. Press HOME key for three seconds to turn handheld on.
2. Press RIGHT ARROW key or the OK key to access “Settings”.
3. Use DOWN ARROW to select “Templates” and press OK.
4. Use DOWN ARROW to select “Programs” and press OK.
5. Use DOWN ARROW to select “Watering Days” (Days to Flush) and press OK.
6. Use UP/DOWN ARROWS to select one of the following:
   a) Custom Cycle (Week): use RIGHT/LEFT ARROWS to move to days of the week, use ON/OFF keys to highlight days on which to flush, then press OK to confirm days when selections are complete.
   b) Even Days: to Flush on even dates, press OK to set.
   c) Odd Days: to Flush on odd dates including 31st, press OK to set.
   d) Odd Days 31: to Flush on odd dated except 31st, press OK to set.
   e) Cyclical: to Flush every “X” days, set “X” using ON/OFF keys (X=1 to 31), press OK to set; then set start date “dd/mm/yyyy” using ON/OFF keys, press OK to set.
7. Use LEFT ARROW to navigate back to the program “Settings” menu.
8. Select “Start times”, press OK to set.
9. Use ABC to select program to be set up.
   a) Set hours and minutes for each start time (up to 8 per program) using ON/OFF keys, press OK to set each (hours are indicated using 24 hour clock).
   b) Use ON/OFF keys to select program A, B and/or C (one or more can be assigned).
   c) Then use ON/OFF keys to set Flush duration (hours and/or minutes) for program just set, use LEFT/RIGHT ARROW keys to move between hours and minutes and + – keys to set times (1 minute to 12 hours), press OK to set.
10. Use LEFT ARROW to navigate back to the program “Settings” menu.
   a) Use DOWN ARROW to select “Valve Run Times” (Flush Duration), press OK to set.
   b) Use ON/OFF keys to select program A, B and/or C (one or more can be assigned).
   c) Then use ON/OFF keys to set Flush duration (hours and/or minutes) for program just set, use LEFT/RIGHT ARROW keys to move between hours and minutes and + – keys to set times (1 minute to 12 hours), press OK to set.

Transmitting Time, Date and Programs to Programming Interface, Clearing/Checking Programs, Manual Start

Connect handheld to programming interface using IR cable.

1. To transmit: from home screen, use DOWN ARROW to select “TBOS-II infra-red” and press OK. TBOS-II handheld will receive data (settings) from built-in programming interface.
2. Once data receipt is complete press RIGHT ARROW to move to “Settings” menu.
3. From “TBOS-II infra-red” settings screen select “Transmit” and press OK again. When program to be transmitted appears, press OK to confirm.
4. To clear programs A, B, or C: from “TBOS-II infra-red” welcome screen, use DOWN ARROW to select “Clear Programs” and press OK, then select type of program to clear and follow prompts.
5. To check programs A, B, or C: from “TBOS-II infra-red” welcome screen, use DOWN ARROW to select “Programs” and press OK, then select what is to be checked and follow prompts.

Manual Flushing

Using TBOS-II handheld on the T-2 built-in programming interface (dark gray in color).

NOTE: Manual start cannot be initiated if there is no program in the programming interface.

1. To start manual flushing from “TBOS-II infra-red” welcome screen.
   a) Use DOWN ARROW to select “Manual Watering” (Manual Flush) and press OK.
   b) Select “Start Valve” (Open Control Valve) then using ON/OFF keys select “Valve 1” and press OK.
   c) Use ON/OFF keys to set the manual Flush Time (1 minute to 12 hours) and press OK to confirm. Flushing will start after a four (4) second delay.

Stop Manual Flush Sequence

1. Reconnect IR cable to built-in interface, then hold down HOME key on handheld.
2. Use RIGHT ARROW to select “TBOS-II infra-red” menu and select “Manual Watering.”
3. Select “Cancel Flush” to cease the manual flush sequence.
HYDRO-GUARD® HG-6 Flushing System

HG-6 Built-In: (Integrated)

NODE Programming Instructions

Batteries
The NODE uses standard 9-volt alkaline batteries to operate the control valve and program the controller. The controller can operate with one or two batteries installed. Under normal conditions, potential life is 1 year for a single battery.

Battery Installation
1. Unscrew rear body of the NODE to gain access to battery compartment.
2. Insert battery/batteries into battery tray and connect the battery connector to controller.
3. Make sure no water is inside battery compartment.
4. Screw the NODE rear body back onto front half.

NOTE: Make sure that seal marker on rear half of the NODE lines up with front half, ensuring a proper seal is created. Also, The NODE has non-volatile memory, which allows battery replacement without losing program information.

Idle Mode – Waking Up
Normally the NODE display shows time and day, day of week, and battery life indicator. During a short period of inactivity the display will shut off to retain battery power. Pressing any key will wake up the NODE to the Idle Mode.

Run Mode
When controller is operating a program, items shown on display will include station number (always "1"), program letter (A, B, or C), remaining runtime, and a blinking Rotor icon.

Programming
The NODE has the capability to hold 3 programs (A, B, C) and 4 start times per program. When programming, flashing portion of display can be changed by pressing + or – keys. To change something not flashing, press LEFT or RIGHT ARROWS until desired item is flashing.

Setting Date/Time
1. Press RETURN/ENTER key until CLOCK icon is displayed.
2. All 4 digits will be displayed representing the year. Use + or – keys to change year. Press RIGHT ARROW key to proceed to setting month.
3. All 4 digits will be displayed with two digits on left flashing representing the MONTH. Use + or – key to change month. Press RIGHT ARROW key to proceed to setting DAY.
4. Only two digits on right will be flashing, representing the DAY. Press + or – key to change day. Press RIGHT ARROW key to proceed to changing TIME.
5. The AM/PM/24 time setting is shown flashing. Press + or – key to change AM, PM, or 24-hour time. Press RIGHT ARROW key to proceed to setting the HOUR.
6. All 4 numbers are shown with two numbers on the left flashing, representing the HOUR. Press + or – key to change the hour. Press RIGHT ARROW key to proceed to setting MINUTES.
7. All 4 numbers are shown with two numbers on right flashing, representing MINUTES. Press + or – key to change minutes. (Pressing RIGHT ARROW key will return to YEAR setting at step #2.)
8. Press RETURN/ENTER key to proceed to next programming function, or allow controller to return to idle mode.

Setting Flush Sequence

Start Times
1. Press RETURN/ENTER key until CLOCK icon is displayed.
2. The START TIME will be displayed flashing, along with the program letter (A, B, or C) and start time number (1, 2, 3, or 4) in the upper left of the display. Up to 4 different start times can be set for each program.
3. Use + or – key to change START TIME for program displayed. Each press of key will change start time in 15-minute increments.
4. Press RIGHT ARROW key to add an additional START TIME to program displayed. The start time number is shown in upper left corner of display.
5. Press PRG key to add START TIME to a different program.
6. Press RETURN/ENTER key to proceed to next programming function, or allow controller to return to idle mode.

Setting Flush Duration Times
1. Press RETURN/ENTER key until HOURGLASS icon is displayed.
2. The RUN TIME will be displayed flashing. Also shown is program letter (A, B, or C) and active station # (always #1– all other stations not used) on lower left side of display.
3. Press + or – key to change station RUN TIME from 1 minute to 6 hours.
4. Press RETURN/ENTER key to proceed to next programming function, or allow controller to return to idle mode.
HYDRO-GUARD® HG-6 Flushing System

Setting Flushing Days

1. Press RETURN/ENTER key until CALENDAR icon is displayed. The program letter (A, B, or C) will be displayed. Arrows point at specific days of week in which flushing will occur.
2. Press LEFT or RIGHT ARROW to scroll through days.
3. Press + key to activate that day for program displayed, or – key to cancel watering for that day. The arrow will show on flushing days for active program.
4. Press PRG key to set days to flush for a different program, if desired.
5. Press RETURN/ENTER key to proceed to next programming function, or allow controller to return to idle mode.

Manual Flushing

Manual flushing allows user to test the Hydro-Guard® unit or a program for a specified run time.

Make sure controller is in Idle Mode.

1. Press and hold RIGHT ARROW until HAND icon is displayed. The station number (always #1) will be displayed in lower left side of display along with RUN TIME.
2. Use the LEFT or RIGHT ARROW to select #1 station if not already displayed, and + or – key to set manual flushing time.
3. To manually activate a program, press PRG key. Program letter (A, B, or C) will show on screen. If a different program is needed, press PRG key until desired program is displayed.
4. To stop MANUAL FLUSHING cycle press – key until time is reduced to zero.
5. Press RETURN/ENTER key to proceed to next programming function, or allow controller to return to idle mode.

NOTE:
– Pressing + or – key when running in MANUAL FLUSH mode will modify FLUSH TIME for that station.
– Pressing the button when a station is running in manual watering will stop flush on the current station and advance to the next station.
– Pressing the button when a station is running in manual watering will stop the flush on the current station and revert to the previous station.

Turn System Off
To turn off controller, press RETURN/ENTER key button until icon resembling water spray and OFF is displayed on screen. To return controller to auto programming mode, press RETURN/ENTER key. The controller will immediately return to auto programming mode and will display time and battery life indicator.

NODE Quick Check
This circuit diagnostic procedure can quickly identify “shorts” commonly caused by faulty solenoids or when bare common wire touches a bare station control wire. To initiate NODE Quick Check procedure:
1. From Idle Mode, press and hold –, RIGHT ARROW, and PRG keys.
2. Display will show all segments. Release keys.
3. Press + key to initiate NODE Quick Check test.
4. Controller will then activate flushing unit for 1 second to verify operation.

Battery Life Indicator
Remaining battery life can be estimated from the battery life indicator shown on display. The NODE can operate using either a single 9-volt battery or using two 9-volt batteries. Using two nine volt batteries will yield approximately twice the battery life of a single 9-volt battery. The battery life indicator chart below shows an estimate of remaining battery life.

Full: 100-60% remaining battery life
Med: 60-25% remaining battery life
Low: 25-0% remaining battery life
Replace battery immediately!

Resetting Controller
Resetting controller will erase current program data and restart controller. A reset does not, however, delete a program saved to permanent memory using the Easy Retrieve Memory feature to save a preferred program.

1. From Idle Mode, press and hold –, RIGHT ARROW, and PRG keys.
2. After two seconds screen will go blank. Continue to hold keys.
3. 12:00 will flash on display. Release keys.
4. The controller may show a countdown from 10 to 1 on display, and then 12:00 am will be shown flashing when reset is complete. The controller can now be reprogrammed.
Disassembly
1. If attached to a fire hydrant; close hydrant’s water supply and allow to drain.
2. Relieve any remaining water pressure within Hydro-Guard® unit by opening sample port.
3. Place HG-6 in area clear of debris.
4. Remove the six security screws from top cover.
5. Remove the four security screws for the unit’s splash pad assembly.
6. Remove the ten 1/4” bolts from the HG-6 housing. It’s necessary to hold corresponding 7/16” lock nuts from inside the housing.
7. Detach Latching Solenoid from control valve.
8. Detach electrical connectors connecting the wiring of the controller (NODE or T-2) and the Latching Solenoid.
9. Remove the four bolts from the sliding clamp assembly prior to removing the two inner clamps.
10. Loosen clamping bolt on bottom of outside face clamp.
11. Slide clamp assembly away from the unit’s 2” Flow Control Valve.
12. Unscrew valve from 2” brass pipe.
13. Remove six 3/8” bolts from valve cover.
14. Pull the top part of the valve away.
15. Check valve for any damages or debris in the inlet and outlet holes on valve.
16. Check diaphragm for any damages and check for any debris in the inlet and outlet holes on inside of the valve cover. When reinstalling valve cover to base, all arrows must point the same direction.

Reassembly
1. Screw valve onto 2” brass pipe.
2. Assemble sliding clamp assembly.
3. Slide clamp assembly toward the unit’s 2” Flow Control Valve.
4. Assemble HG-6 housing by installing the ten 1/4” bolts. Don’t forget the corresponding 7/16” lock nuts inside the housing.
5. Attach Controller to Latching Solenoid.
6. Install top cover with the six security screws.
7. Install the six security screws from cover assembly.
8. Reinstall diaphragm, following inspection into valve’s top section.

WARNING: Use caution to avoid damaging plastic screen plug.
9. Reinstall screws in valve and tighten

WARNING: Use caution when tightening screws. Overtightening can damage valve body.

WARNING: Ensure flow arrows on top and bottom of valve body are facing the same direction and match the flow pattern of the flushing device.

Battery Replacement
HG-6 Removable TBOS-II Controller
1. Use HG-A104 Security Tool to remove protective Security Screws from Housing Cover.
2. Unscrew protective cap from gray Programming Interface located at top of unit.
3. Extract battery harness and remove old battery (dispose of battery appropriately).
5. Screw protective cap back into place and hand tighten securely.
6. Use Handheld Controller to reset all programs and assure flushing sequence is correct prior to returning the HG-6 Unit to service.
7. Reinstall Exterior Housing Cover and restore water supply to unit.

HG-6 Built-In NODE Controller
1. Follow HG-6 Removable TBOS-II Controller steps 1 – 3 (left) to access on-board Programmer.
2. Connect fresh industrial grade 9-volt alkaline battery and reinsert it with harness into Programmer (an optional battery harness is provided for redundancy and extended battery life).
3. Screw protective cap back into place and hand tighten securely.
4. Confirm that desired flushing sequences are correct prior to returning the HG-6 Unit to service.
5. Reinstall Exterior Housing Cover and restore water supply to unit.

Battery Replacement

It is recommended that batteries be changed every six (6) months or when the low battery icon appears (see Programming for battery type). If you need further assistance, please contact us at 877.864.8500.
HYDRO-GUARD® KEY FEATURES, OPTIONS AND UPGRADES

From the integrated sample stations to dechlorination upgrades, your Hydro-Guard® Device offers an outstanding return on investment.

The following is a brief overview and introduction to Hydro-Guard® Options.

Integrated Sample Station
Increase your control of chlorine or chloramines residual maintenance through the integrated sample station. The built-in Sample Valve is located inside the top lid of the HG-6 (this feature in an option on the HG-6/Basic). Make sure to firmly grip the tubing and then turn the ball valve, and collect your sample. You may wish to run a brief manual-mode flush prior to the collection in order to ensure water indicative of the main-line water quality is being sampled. Generally a two-minute flush is sufficient. Track your residual levels and alter flushing frequency and/or duration in order to maximize water conservation.

Dechlorination
The HG-6 Hydrant-Based Flushing System has a built-in Dechlorination chamber located in the base of the unit (not available on the HG-6/Basic). By removing the Dechlorination Chamber access door, pull out the chamber and load it with sodium sulfite or ascorbic acid tablets. Dechlorination takes place as a portion of the discharged water passes through this chamber. This action creates a concentrated dechlorination solution that then mixes with the non-directly treated portion of the discharged water.

S.M.A.R.T. Monitoring and Flush Management
The Hydro-Guard HG-6 can be upgraded to include a S.M.A.R.T. controller and a variety of water quality sensors. The S.M.A.R.T. equipped HG-6 will allow a utility to remotely monitor, in real-time, the water quality at a specific flush point and automatically initiate a flush event when water quality conditions warrant.

The Hydro-Guard® S.M.A.R.T. Flushing System:
• Monitors chlorine levels (total or free).
• Flushes distribution line when residual disinfectant drops below acceptable levels.
• Monitoring of pH, flow, temperature or turbidity available.
• Two-way real-time communication via cellular, wifi, ethernet or BlueTooth®.
