## SUPER CENTURION® 350 FIRE HYDRANT

### FOR HIGHER PRESSURE SYSTEMS AND LOWER OPERATING TORQUE

Our Centurion® 4½" and 5¼" main valve fire hydrants are now available with 350 psi working and 700 psi test pressure ratings as an option. The Centurion 350 Hydrant is built to take the pressure in more ways than one. Its reinforced main valve reliably seals at this higher pressure rating – and it's reversible. Up in the bonnet, a roller bearing above the thrust collar assures it will take less operating torque to open or close the Centurion 350 hydrant than many others rated for lower pressures. The automatic lubrication system that force circulates oil over all surfaces of the operating nut and stem threads help to make sure the Mueller Centurion hydrant remains easy to operate year after year – it's a Mueller exclusive design. Of course, O-ring seals are used throughout, just as they are on our standard Centurion hydrants to assure leak-free seals at all flange connections, nozzles and within the operating mechanism.

You can expect the same high performance and years of trouble-free service that have helped to make the Centurion hydrant the most sold brand of fire hydrant in North America. It complies with AWWA C502 and the Reduction of Lead in Drinking Water Act, is UL/FM Approved, and certified to ANSI/NSF 61 Annex G and 372. The Centurion 350 parts are interchangeable with our current Centurion hydrants, which helps keep parts inventories in check.
