SUPER CENTURION® A-459 URBAN FIRE HYDRANT

MULTIDIRECTIONAL ACCESS TO EMERGENCY WATER

Hydrants share responsibilities with two important groups of professionals: (1) water departments and the utility crews that manage them; and (2) fire departments, who are the first responders to emergencies. Both groups use the hydrant for different purposes.

The new A-459 hydrant provides both groups with the ability to access the pumper nozzle from two-directions. Whether the hydrant's pumper nozzle is oriented perpendicular to the street (as in a street corner) or the pumper nozzle is oriented parallel to the street, both installations provide access from both directions and give both water utilities and firefighting professionals more options and improved access.

The Mueller® Super Centurion A-459 fire hydrant provides multidirectional access to emergency water in busy urban settings where vehicles aren't always parked where they should. Featuring two pumper and two hose nozzles, first responders can quickly connect to all sides of the hydrant. Combine this feature with a Storz nozzle and Mueller's solid reputation for manufacturing the most dependable, easy-to-operate fire hydrants in the market, you have a recipe for success.

From "head to toe" (e.g. bonnet to shoe), the A-459 urban fire hydrant leads the pack. The bonnet features an automatic lubrication system that forces oil circulation over all surfaces of the operating nut and stem threads to assure this Centurion hydrant remains easy to operate year after year. The shoe includes a reversible, reinforced main valve to make certain operation is smooth, reliable and easy. Like all Centurion hydrants, O-ring seals are used throughout to provide leak-free seals at all flange connections, nozzles and within the operating mechanism.

The A-459:

- Complies with AWWA C502, is UL 246 listed, and is certified to ANSI/NSF 61 & 372
- Uses parts that are interchangeable with current Centurion hydrants
