Re: Pressure Rating of Ground Key Service Brass

Mueller Ground Key service brass products are produced at our ISO 9001 facility in Decatur Illinois. These products are produced in accordance with all applicable requirements of AWWA C-800.

Ground Key valves are for use in "Normal Pressure" applications. AWWA C-800 section 4.2.2 (attached) defines normal pressure for 1" and smaller valves to be 100 psig or less and for 1 ¼" through 2" valves to be 80 psig or less.

Should you be trying to pressure test the service line at higher pressure AWWA C-800 Appendix B (attached) allows pressure testing up to 150% of max pressure in the open position with the end capped.

Should your application need higher working or test pressure please choose the Mueller 300® ball valve.

Please contact me with questions,

Sincerely,
