

Mueller® Vertical Flange Fire Hydrant Shoe

Mueller Centurion® Fire Hydrants with the vertical flange shoe make hydrant ordering and inventory easy.

Centurion hydrants with one bury depth can be ordered and easily adapted for any trench depth at each installation. Ductile iron pipe can be cut to the appropriate lengths to bring the hydrant to different grade levels. In the future, should a hydrant need to be adjusted to a new grade, simply install a different length of pipe. By using the vertical flange shoe, time and cost savings can be realized throughout the ordering, inventory, and installation process; In addition, this unique product eliminates the need for deep bury hydrants.

The vertical flange shoe is available on the Mueller Super Centurion 350, Super Centurion 250, Centurion 200, and Modern Centurion Fire Hydrants in 5-1/4" and 4-1/2" sizes with a 6" ASME B16.1 Class 125 drilling. The Mueller Super Centurion 250 and Centurion 200 4-1/2" size can also be ordered with a 4" ASME B16.1 Class 125 drilling.
